More cash and less grain

With stocks of rice and wheat finely balanced amid monsoon-linked production uncertainties, the scope for distributing and exporting surplus grains has considerably reduced, in stark contrast from 3 years ago.

Harish Damodaran

THREE YEARS ago, neither the Centre nor the states had money to make large-scale cash transfers to poor and vulnerable households suffering job and income losses during the pandemic-enforced lockdowns.

But there was plenty of wheat and rice in the Food Corporation of India’s (FCI) warehouses: some 313.5 million tonnes of grain. The government had purchased wheat from farmers at below-market prices to shore up the grain market, and the FCI had accumulated about 197.6 million tonnes of rice, including 62.5 million tonnes of procured rice for the Food Supplies and Distribution (FSD) programme.

Then there was surpluses in the central pool, the national strategic reserve. There was a buffer of about 3.5 million tonnes of rice and 1.5 million tonnes of wheat, besides a buffer reserve of 2.5 million tonnes of rice.

Thus, there was surplus grain not only to give out free, but to export in record quantities.

Cash for grain

The situation is almost the reverse today. Government has money, due to the reimbursement of economic activity. Gross goods and services tax revenue grew 213% in 2022-23 and has risen 11.6% in April-June 2023 over April-June 2022. However, FCI godowns aren’t exactly busting at the seams.

The Centre, during the post-Covid period till December 2022, supplied 10 kg of rice or wheat per person per month to all PDS beneficiaries. From January this year, that quota was restored to its previous level of 5 kg under the NFSA.

The Congress government in Karnataka last month sought additional grain from the FCI to implement its Assembly election promise of providing 10 kg of free rice per month to all members of below-poverty-line (BPL) households. But with the Centre not permitting FCI to make available the 5 kg extra rice, Karnataka has been forced to give cash in lieu of grain. So, instead of 5 kg rice, and above the Centre’s 5 kg under NFSA – the Siddaramaiah-led government has, from July 10, started transferring Rs 170 against the name of each beneficiary to the bank accounts of their BPL family heads.

Simply put, earlier there was grain but no money. Now, there’s no much grain, but governments have money to pay PDS beneficiaries for them to buy 5 kg of rice at Rs 34/kg.

Depleted stocks

Publicly, of course, the ruling Bharatiya Janata Party (BJP) at the Centre has little incentive to enable a Congress state government to fulfill a poll guarantee. But there are economic reasons why the Centre would hesitate to supply additional grain, even to 80%-plus states.

To show total stocks of wheat and rice in the central pool on July 1 at a five-year low. These stocks are, no doubt, more than the normative minimum, both to meet the supply requirements of the PDS for any quarter and a strategic reserve to take care of crop failures or natural calamities.

The concern, though, isn’t with the present stock levels but 1.7 times the required minimum. Rather, it’s to do with the monsoon and the uncertain prospects for this year’s rice crop, which may have a bearing on procurement and stocks down the line. And that would be closer to the national elections in April-May 2024.

Rainfall during the current southwest monsoon season (June-September) has been normal for the country, at its long-term average. But it has been deficient or significantly below-normal in major rice-growing areas, including Telangana (-24.2%), Andhra Pradesh (-16.1%), Chhattisgarh (-21%), Odiha (-23.1%), Jharkhand (-41.4%), Bihar (-32.3%) and Gangetic West Bengal (-37.2%).

The poorly distributed rain has meant that farmers had, as on July 10, partially or completely cultivated only 123.18 lakh hectares (ha) out of the normal total 390.45 ha under rice during the kharif (monsoon) season. The cumulative area sown was also 6.1% lower than the 131.23 ha covered during this time last year. Moreover, with El Niño known to suppress rainfall in India – already setting in and most global forecasts pointing to its persistence through the 2023-24 winter, there is concern about the monsoon’s performance in the rest of the season.

Deficient rainfall in the monsoon’s second half can impact the production of not just the kharif rice, but also the upcoming second and third crop cycles. The wheat crop, with good harvests expected in the rest of the country, is expected to generate a buffer of 6.72 million tonnes.

The export conundrum

A poor crop last year led the Centre to ban wheat exports in May 2022. It was followed by a prohibition on exports of broccoli rice and 5% broken rice under the non-basmati shipments in September.

Despite these restrictions, the last two years registered record exports of rice and wheat. Adding seize to other cereals, the total exports amounted to 32.3 million tonnes in 2021-22 and 30.7 million tonnes in 2022-23, worth $12.87 billion and $13.86 billion respectively.

But with retail cereal inflation at 12.7% year-on-year in June and the monsoon-related production uncertainties, the Centre is reportedly considering further curbs on rice exports. Globally, too, rice is on fire. The UN Food and Agriculture Organization’s (FAO) Rice Price Index (base year value of 100 for 2014-16) averaged 125.2 points in June, 13.9% higher than a year ago. Paddy rice with 5% broken grains content is currently being exported from India at $42.6 per tonne, the highest since April 2018.

India is the world’s largest rice exporter, with a 40.4% share of the global trade in the cereal, according to the US Department of Agriculture’s estimates for 2022-23. A corollary to that is that the country cannot really import rice in case of domestic production shortfalls; it can at best limit exports. This is unlike wheat, which can be imported, especially given benign global prices because of ample supplies from Russia.

In a scenario where FCI’s grain balances are far from overflowing, one cannot rule out many states emulating Karnataka in doling out cash as opposed to free grain. It’s another thing that, from a macroeconomic standpoint, the former is inflationary and the latter deflationary.
